In mathematics and computer science, an algorithm (/ ' æ l g ə r ɪ ð ə m / ()) is a finite sequence of well-defined instructions, typically used to solve a class of specific problems or to perform a computation. Algorithms are used as specifications for performing calculations and data processing. By making use of artificial intelligence, algorithms can perform automated deductions ...

Working of a Decision Tree Algorithm. There are many steps that are involved in the working of a decision tree: 1. Splitting - It is the process of the partitioning of data into subsets. Splitting can be done on various factors as shown below i.e. on a gender basis, height basis, or based on class.
