Algorithm Design M. T. Goodrich and R. Tamassia John Wiley & Sons Solution of Exercise C-1.8 Since r is represented with 100 bits, any candidate p that the eavesdropper might use to try to divide r uses also at most 100 bits. Thus, this very naive algorithm requires 2^{100} divisions, which would take about 2^{80}

solution is inadequate. To provide a better perspective on how algorithm problems arise in the real world, we include a collection of “war stories,” or tales from our experience with real problems. The moral of these stories is that algorithm design and analysis is not just theory, but an important tool to be pulled out and used as needed.
