4 1. The Physical Origins of Partial Differential Equations The initial condition is  $u(x,0) = 0$  and the boundary condition is  $u(0,t) = n_0$ . To solve the equation go to characteristic coordinates  $\xi = x - ct$  and  $\tau = t$ . Then the PDE for  $N = N(\xi, \tau)$  is  $N_\tau = -r \sqrt{N}$ . Separate variables and integrate to get  $2 \sqrt{N} = -r\tau + \Phi(\xi)$ . Thus  $2 \sqrt{n} = -r\tau + \Phi(x - ct)$ .

For higher-order partial differential equations, one must use smoother basis functions. For instance, for a fourth-order problem such as  $u_{xxxx} + u_{yyyy} = f$ , one may use piecewise quadratic basis functions that are  $C^1$ .

### **MAP 4341/5345 Introduction to Partial Differential Equations**

The precise idea to study partial differential equations is to interpret physical phenomenon occurring in nature. Most often the systems encountered, fails to admit explicit solutions but fortunately qualitative methods were discovered which does provide ample information about the system without explicitly solving it.
