Separation and Qualitative Determination of Cations and Anions
Background Information: Much of laboratory chemistry is focused on the question of how much of a given substance is contained in a sample. Sometimes, however, the focus shifts to what substances are in the sample, rather than their quantity. In this experiment, an analysis scheme for identifying both cations and anions in

A common analysis is the identification of aqueous ions. In such an analysis, there are two distinct phases. First, a scheme must be developed to separate the ions from each other. Then, a different test is performed to uniquely confirm the identity of each separated ion. In this lab, we develop a qualitative analysis scheme to separate and ...
