Dental Materials

The principal aim of Dental Materials is to promote rapid communication of scientific information between academia, industry, and the dental practitioner. Original Manuscripts on clinical and laboratory research of basic and applied character which focus on the properties or performance of dental materials or the reaction of host tissues to materials are given priority publication.

Dental Materials - Journal - Elsevier

Dental lining materials are used during restorations of large cavities, and are placed between the remaining tooth structure and the restoration material. The purpose of this is to protect the dentinal tubules and the sensitive pulp , forming a barrier-like structure.

Restorative Materials. Metals. Silver Amalgam. Silver alloys such as silver-gold, silver-copper, silver-tin are routinely used in dental amalgams to fill cavities formed by tooth decay or broken teeth. Most often dental amalgam is a self-hardening mixture of silver-tin-copper alloy powder and liquid mercury.
