Thermodynamic Cycles - Clarkson University

An internal combustion engine (ICE) is a heat engine in which the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine,

External Combustion Engine - an overview | ScienceDirect ...

In engineering, the Miller cycle is a combustion process used in a type of four-stroke internal combustion engine. The Miller cycle was patented by Ralph Miller (engineer), an American engineer, in the 1940s. A Miller-cycle engine is very similar to an Otto-cycle engine.
