Ecology (from Ancient Greek οἶκος (oikos) 'house', and -λογία (l) 'study of') is the study of the relationships between living organisms, including humans, and their physical environment.Ecology considers organisms at the individual, population, community, ecosystem, and biosphere level. Ecology overlaps with the closely related sciences of biogeography, evolutionary biology ...

### Ecology - Wikipedia

The data I collected supported Dr. Losos' claim by showing that because the environment on the island was more suited for shorter legs, the lizards evolved to have shorter legs. Ecomorphs are based on ancestral causes, not geological location/isolation, so the anoles evolved with shorter legs because shorter legs increased their chances of ...

In keeping with the non-anthropocentric focus of much environmental philosophy, a care for sustainability and biodiversity can embrace a care for opportunities available to non-human living things. However, when the concept "sustainable development" was first articulated in the Brundtland Report, the emphasis was clearly anthropocentric.

### Environmental Ethics (Stanford Encyclopedia of Philosophy)

Sustainable consumption (sometimes abbreviated to "SC") is the use of material products, energy, and immaterial services in such a way that their use minimizes impacts on the environment, so that human needs can be met not only in the present but also for future generations. Consumption refers not only to individuals and households, but also to governments, business, and other institutions.
