Elementary algebra encompasses some of the basic concepts of algebra, one of the main branches of mathematics. It is typically taught to secondary school students and builds on their understanding of arithmetic. Whereas arithmetic deals with specified numbers, algebra introduces quantities without fixed values, known as variables. This use of variables entails use of algebraic notation and an ...

Answer: Using the differential equation of the orbit, equation (3.34) in Goldstein,  $\frac{d^2 u}{d\theta^2} + u = -\frac{GM}{h^2}$  Where  $r = 1/u$  and with the origin at a point on the circle, a triangle drawn with  $r$  being the distance the mass is away from the origin will reveal  $r = \frac{2R}{1 - \cos \theta}$  Plugging this in and taking the derivative twice,  $u =$

In mathematics, approximation theory is concerned with how functions can best be approximated with simpler functions, and with quantitatively characterizing the errors introduced thereby. Note that what is meant by best and simpler will depend on the application.. A closely related topic is the approximation of functions by generalized Fourier series, that is, approximations based upon ...
