Swpm Users Manual

For the current SolMan 7.2 Installation based on SR2, you still have to unzip the four Files in it's own Directory to the Download Folder to be able to recognized by the SWPM 1.0 which is still be used. (e.g. SWPM10SP32_6-20009701.SAR) ABAP Instance SM9 for SolMan 7.2

SAP MacGyver - Installing SAP SolMan 7.2 | SAP Blogs

That is to reduce manual work for the administrator. MONITOR_SERVICES: no: disp+work| msg_server ... use SAPINST_USE_HOSTNAME argument to specify the virtual hostname of instance when starting SWPM. Example of starting installation of instance: ... New users and groups (typically appearing at the end of following files: /etc/passwd, /etc ...

SAP Netweaver ASCS/ERS ENSA1 in a Pacemaker Cluster Using ...

You can always change the hostname after downtime post processing, before releasing the system to functional team and final users. But for sure, you can't use the same hostname for 2 different servers (even with different IP address) within an SAP process (SUM, SWPM, etc). Kind regards.

DMO with System Move - the use case to change PAS host ...

The underlying idea of Clustering is a fairly simple one: Not a single large machine bears all of the load and risk; but rather one or more machines automatically drop in as an instant full replacement for the service or the machine that has failed. In the best case, this replacement process causes no interruption to the systems' users. 1.2 ...
