## **Who Was Who In Orthodontics**

Orthodontics as a modern science dates back to the mid 1800s. Influential contributors to the field include Norman William Kingsley (1829–1913) and Edward Angle (1855–1930). Angle created the first simple system for classifying malocclusions, a system which is still used today.

## **Orthodontics - Wikipedia**

Orthodontics, division of dentistry dealing with the prevention and correction of irregularities of the teeth—generally entailing the straightening of crooked teeth or the correcting of a poor bite, or malocclusion (physiologically unacceptable contact of opposing dentition, which may be caused by imperfect development, loss of teeth, or abnormal growth of jaws).

## **orthodontics | Definition & Practice | Britannica**

In addition to Angle's work in basic orthodontic developments, Eugene Solomon Talbot (1847-1924) began the use of X-rays for orthodontic diagnosis. The use of rubber elastic bands to move teeth was pioneered by Calvin S. Case and H. A. Baker.

## **Orthodontics | Encyclopedia.com**

Dental Impressions began around the beginning of the 17th century with Matthaeus Gottfried Purmann, who reported using wax to take impressions. Then in 1756, Phillip Pfaff used plaster of Paris. Ultimately, progress in orthodontics stalled after ancient times until the 18th century, which saw a surge in development.
